ÇAKI

INTERROGATION ARM SYSTEM

INTERROGATION ARM SYSTEM

ÇAKI Interrogation Arm System is designed to be mounted over all kind of armoured vehicles, to provide road and convoy security against IED (improvised explosive devices).

By usage of ÇAKI Interrogation Arm System, detection and interrogation of IED's placed at roadsides or vents is achieved.

ÇAKI Interrogation Arm

- Cable Detection Sensor(Integrated to arm) – mini GPR for IEDs
- Cameras on the robotic arm
- Video / Image recording systems
- Cutter equipment
- Driller and Harrow equipment
- Automatic engagement to previously recorded locations
- Easy replacement of different tip attachments
- Can be directed to different locations of the vehicle without affecting mobility
- User-friendly graphical user interface
- Front surveillance camera and rear camera for situational awareness
- Minimum 8 meters of length
- Maximum 200 kg of lifting capacity
